

ANDROID PHONE / TABLET

FleetSlate Driver - Android Installation Guide

Install the Android Driver app, pair the phone once, then verify that future launches go straight to Driver Home.

Written for non-technical users. Follow the steps in order. System wording can vary slightly by device version, but the FleetSlate screens and workflow shown here match release 3.15.0.

GUIDE OVERVIEW

What you will do

The Office administrator should prepare the driver record first. The driver needs only the Android installer and the QR or short pairing code.

01

Open the FleetSlate Download page

Use the Android phone or tablet to open the Driver installer.

02

Download and install the Android app

Open the downloaded APK and allow the standard Android installation prompt.

03

Open the pairing screen

FleetSlate Driver asks for the one-time connection to Office.

04

Connect the selected driver

Use the QR or short code and tap Connect FleetSlate Driver.

05

Reopen the app and confirm automatic Home

Close FleetSlate Driver fully and open it again.

06

Complete a first check

Open Checks and submit one complete test record.

07

Test reconnect and offline retry

Confirm supported work is delivered after the internet returns.

Keep it simple

You do not need to enter server addresses, tunnel settings or technical connection details. FleetSlate handles the connection flow for you.

STEP 01

Open the FleetSlate Download page

On the Android device that the driver will use, open fleetslate.uk/download/ and choose FleetSlate Driver for Android.

- Use the same device that will remain assigned to the driver.
- The Android download is listed separately from the Office installers.

Current FleetSlate Driver mobile presentation.

STEP 02

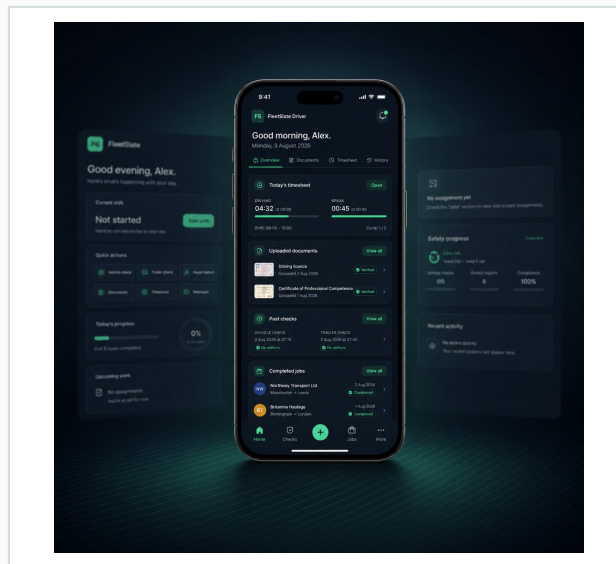

Download and install the Android app

Open the downloaded FleetSlate Driver Android package. Android may ask you to allow installation from the browser or file app you used. Approve only the FleetSlate package you downloaded from fleetslate.uk.

- Tap Install and wait until Android confirms completion.
- Then tap Open or use the FleetSlate Driver app icon.

Good to know

Android menu names vary by phone manufacturer. If your device asks for permission to install this app, enable it only for the app you are using to open the FleetSlate package.

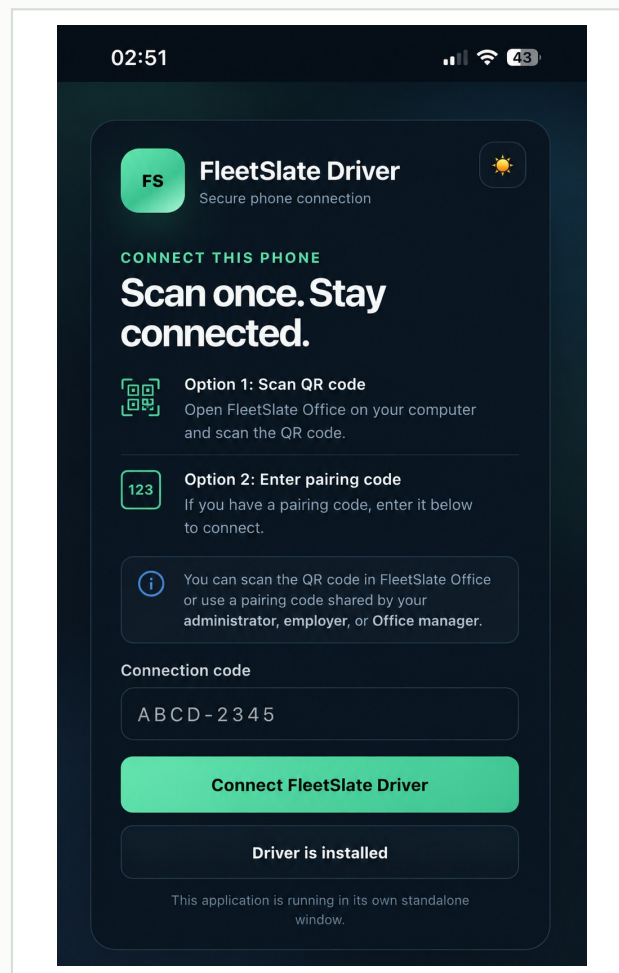

FleetSlate Driver installed as a full-screen mobile app.

STEP 03

Open the pairing screen

The first launch opens the FleetSlate Driver connection screen. You can scan the QR code from Office or type the short code into the Connection code field.

- The pairing code or QR code may be shared by the administrator, employer or Office manager.
- No server name, tunnel setting or email password is required.

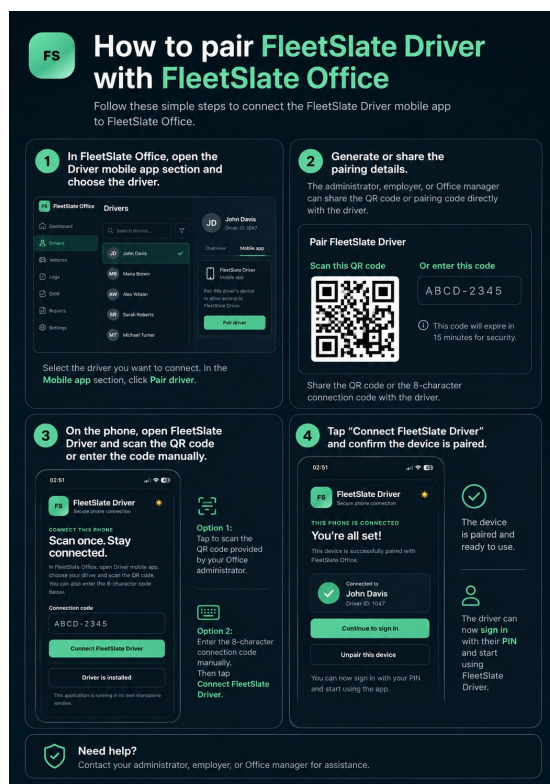

Current one-time FleetSlate Driver pairing screen.

STEP 04

Connect the selected driver

Confirm that the pairing information belongs to the correct company and driver, then complete the connection. FleetSlate stores the authorised device session on the phone.

- Do not reuse another driver's pairing code.
- The Office user can revoke a lost or replaced phone later.

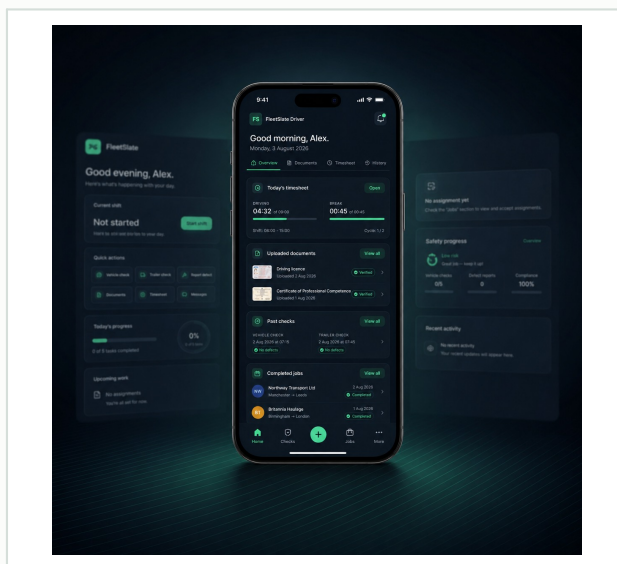

Visual pairing flow between FleetSlate Office and Driver.

STEP 05

Reopen the app and confirm automatic Home

After successful pairing, close FleetSlate Driver and reopen it from the app icon. The app should restore the authorised phone session and go directly to Driver Home.

- You should not be asked for the pairing code again during normal daily use.

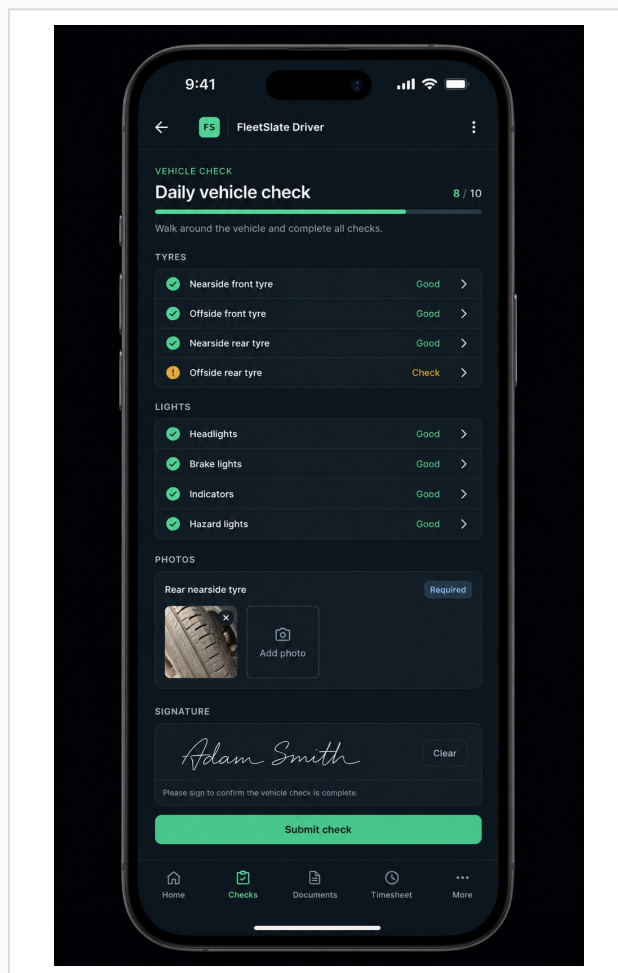

Current Driver Home screen after the phone is paired.

STEP 06

Complete a first check

Open Checks, work through the required vehicle or trailer items, add a photo or defect details if needed, sign, then submit.

- Every required checklist item must be marked before submission.
- Defects can include a description and supporting photo.

STEP 07

Test reconnect and offline retry

If you want to verify offline resilience, temporarily disconnect the phone, save a supported record, then reconnect. FleetSlate should retry automatically.

- Do not delete app data during the test.
- Return to Office and confirm the record appears after reconnection.

READY TO USE

Your FleetSlate setup is ready for the first working day

Use the Download page whenever you need an installer or PDF guide. Keep activation keys, private download links and administrator access private.

- Open fleetslate.uk/download/ for installers and all PDF guides.
- Open fleetslate.uk/installation/ for the full web-based setup instructions.
- Use the support form if a device does not behave as shown.

Support

If a phone is lost or replaced, revoke the old device in FleetSlate Office before sharing a new pairing code.
