

FleetSlate Quick Start

From first Office download to a paired Driver phone and a verified first work record.

**01**

Install Office

Download Windows or macOS Office from fleetslate.uk/download/ and create the company workspace.

02

Add first records

Create one driver and at least one vehicle or trailer.

03

Install Driver

Use the Android or iPhone/iPad installer on the driver phone.

04

Pair once

Office shares a QR or short code. After pairing, later launches should open Driver Home automatically.

FIRST WORKING-DAY CHECK

Confirm the setup in five minutes

1. Open Driver again

After pairing, fully close FleetSlate Driver and reopen it. The phone should return directly to Home without asking for another pairing code.

2. Submit one record

Complete a small test such as a vehicle check or timesheet entry.

3. Confirm it in Office

Make sure the Office dashboard or relevant record list receives the new Driver submission.

4. Test reconnect if you want

Disconnect the phone briefly, save a supported record, reconnect and confirm FleetSlate retries automatically.

Important pairing note

The QR code or short pairing code may be shown or shared by the administrator, employer or Office manager. A new pairing should be needed only after intentional disconnect, device revocation or removal of app/profile data.
