

FleetSlate Driver - iPhone and iPad Installation Guide

Use the real iPhone and iPad installation flow, install the FleetSlate profile, pair once and then reopen directly to Driver Home.

Written for non-technical users. Follow the steps in order. System wording can vary slightly by iOS or iPadOS version, but the FleetSlate screens and workflow shown here match the current public installation flow.

GUIDE OVERVIEW

What you will do

These iPhone and iPad screens are based on the current FleetSlate installation flow, translated to English and anonymised for the public guide.

01

Open the iPhone / iPad install link in Safari

Use Safari on the selected device and tap Install on iPhone / iPad.

02

Allow the configuration profile download

When Safari or iOS asks for permission, allow the profile download.

03

Open Settings and choose Profile Downloaded

Leave Safari, open Settings and tap Profile Downloaded.

04

Install the FleetSlate Driver profile

Review the profile details and tap Install.

05

Confirm the unsigned profile warning

Continue only if you started the download from fleetslate.uk.

06

Confirm Profile Installed

Finish the installation and return to the Home Screen.

07

Pair the device once

Scan the QR code or enter the short code in FleetSlate Driver.

08

Confirm future launches go straight to Home

Close the app once, reopen it, and check that it returns directly to Home.

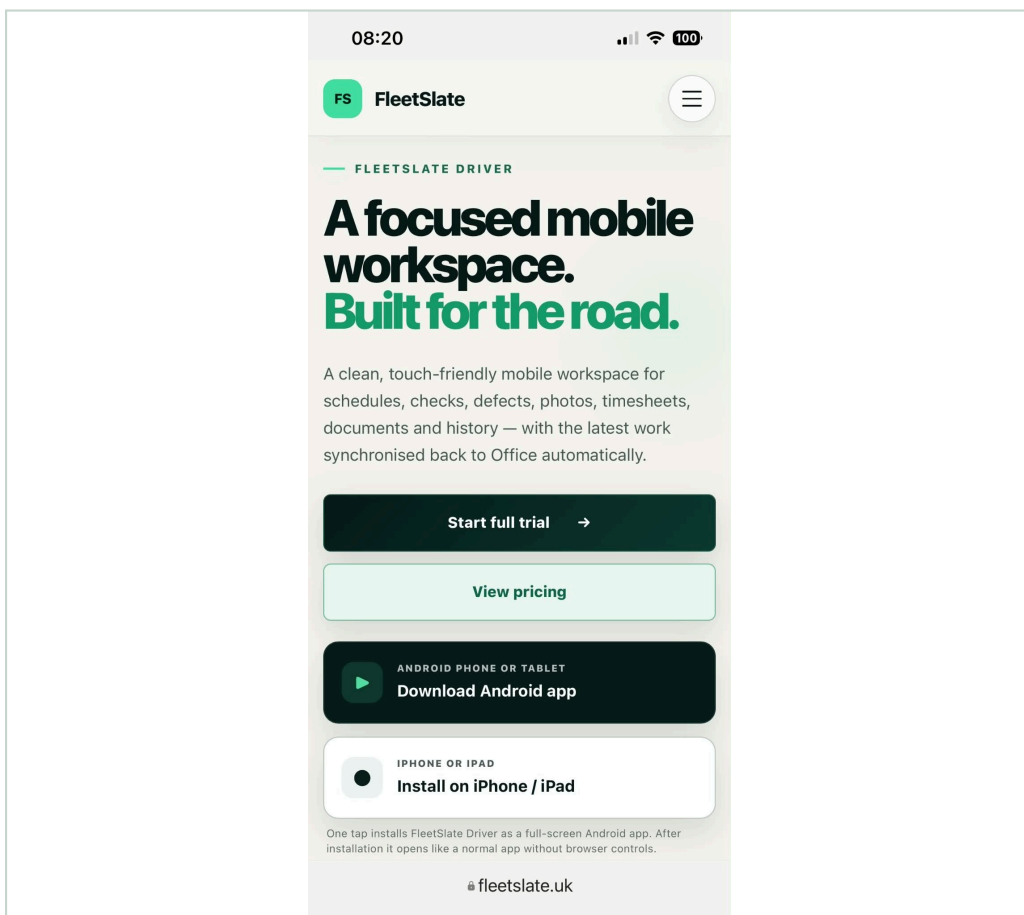

Keep it simple

STEP 01

Open the iPhone / iPad install link in Safari

Open fleetslate.uk/download/ in Safari on the iPhone or iPad that the driver will use. Tap the iPhone / iPad installer on the FleetSlate download page.

- Use Safari for this installation flow.
- Start from the official FleetSlate download page.

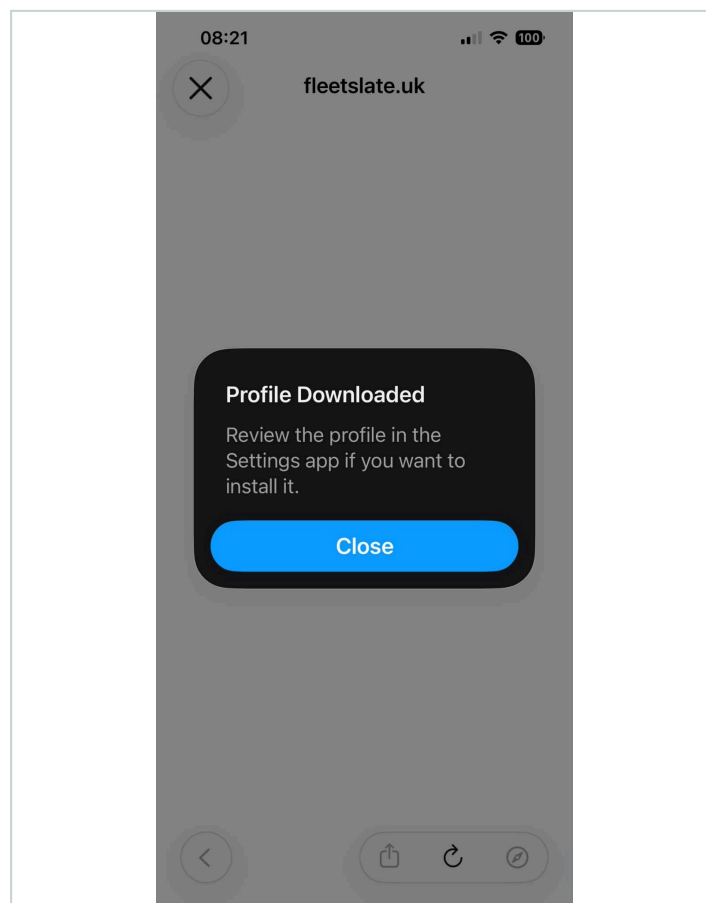

STEP 02

Allow the configuration profile download

When Safari or iOS asks whether the website can download a configuration profile, allow the download. After that, iOS confirms that the profile has been downloaded.

- The download begins from fleetslate.uk.
- You may see slightly different wording on different iOS versions.

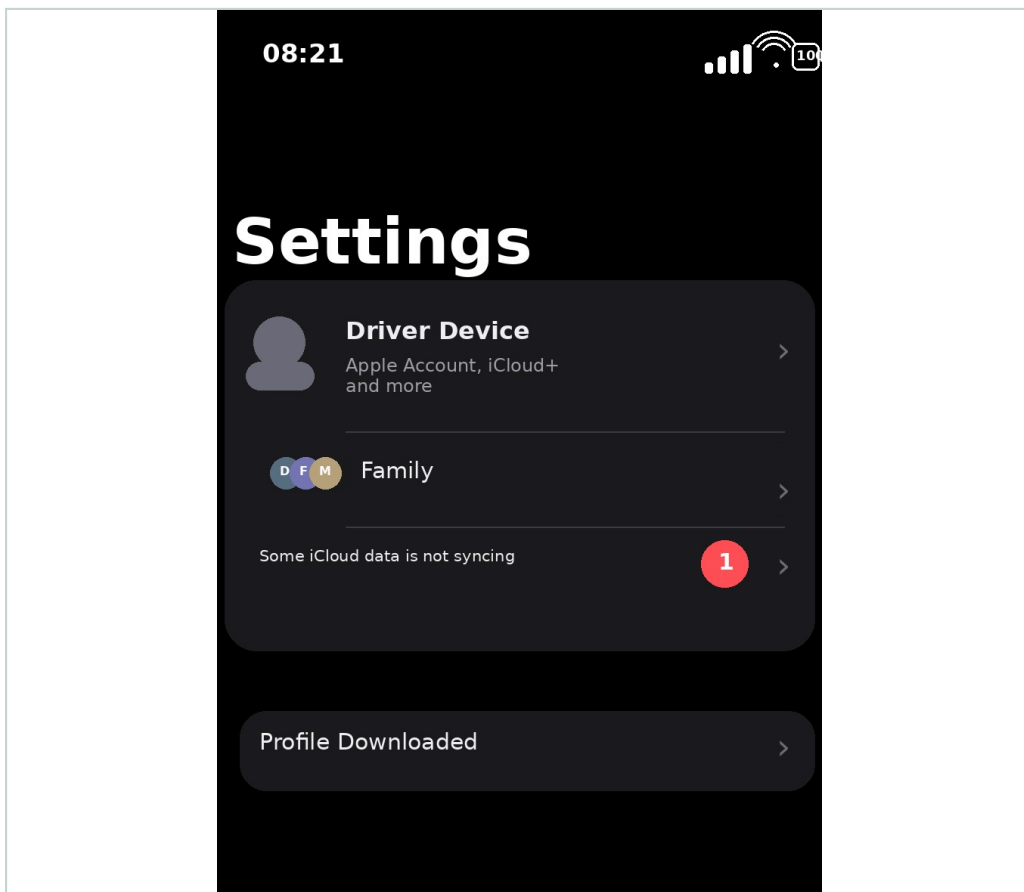

STEP 03

Open Settings and choose Profile Downloaded

Leave Safari and open Settings. Near the top of Settings, tap Profile Downloaded. On some iOS versions the wording or position can vary slightly.

- Make sure the profile name is FleetSlate Driver.
- Private account details have been anonymised in this guide.

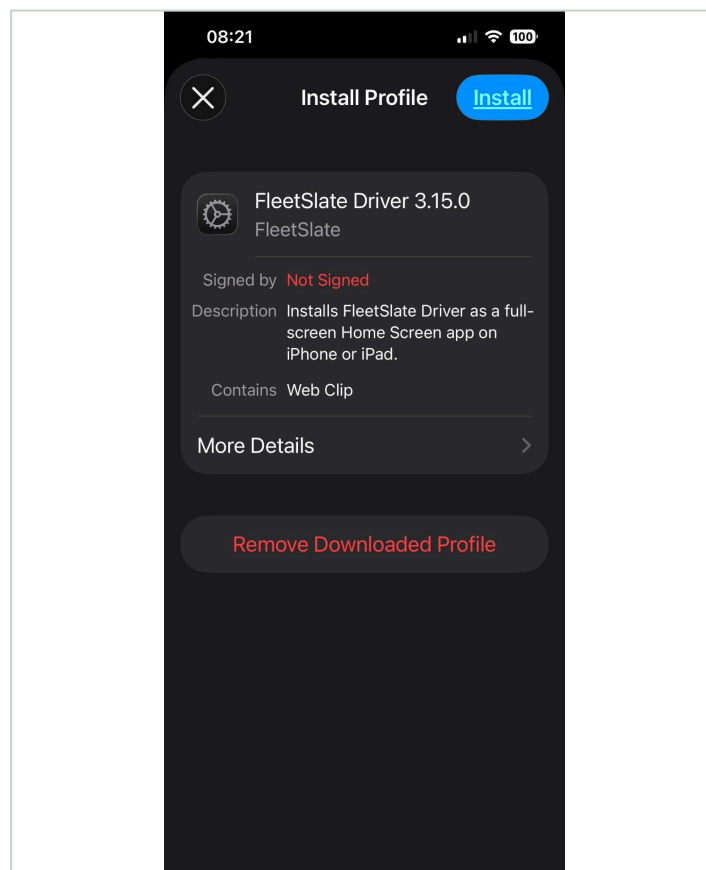

STEP 04

Install the FleetSlate Driver profile

Review the FleetSlate Driver profile details, tap Install in the top-right corner and continue the installation when iOS asks again.

- The FleetSlate profile installs the app as a full-screen Home Screen app on iPhone or iPad.
- Do not install similarly named profiles from unknown sources.

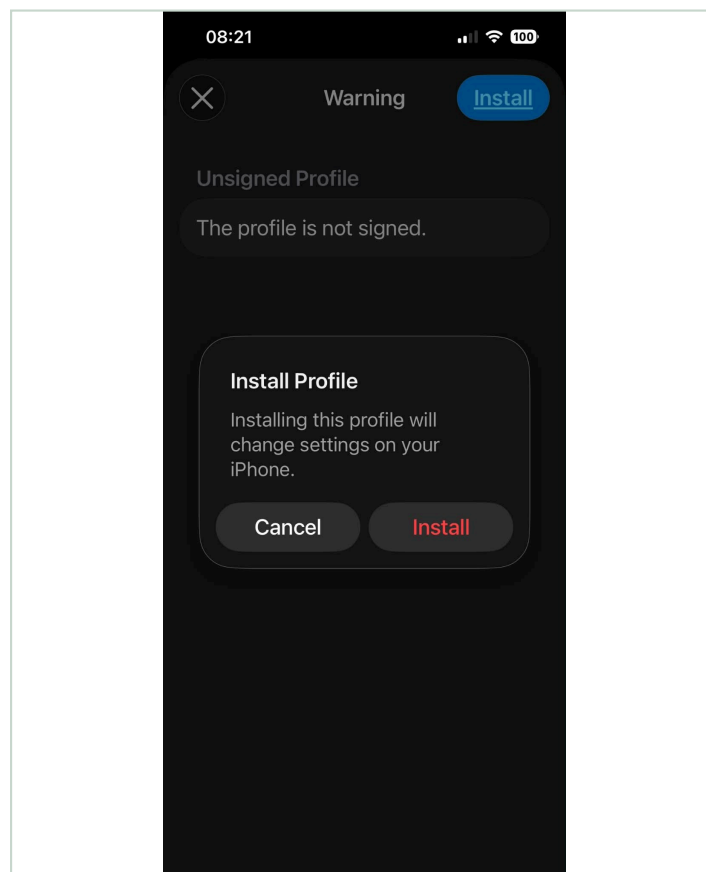

STEP 05

Confirm the unsigned profile warning

iOS may show a warning that the profile is not signed. Continue only if you started the download directly from fleetslate.uk or an official protected FleetSlate delivery link.

- Tap Install to continue the first-time setup.
- This warning is part of the normal installation flow.

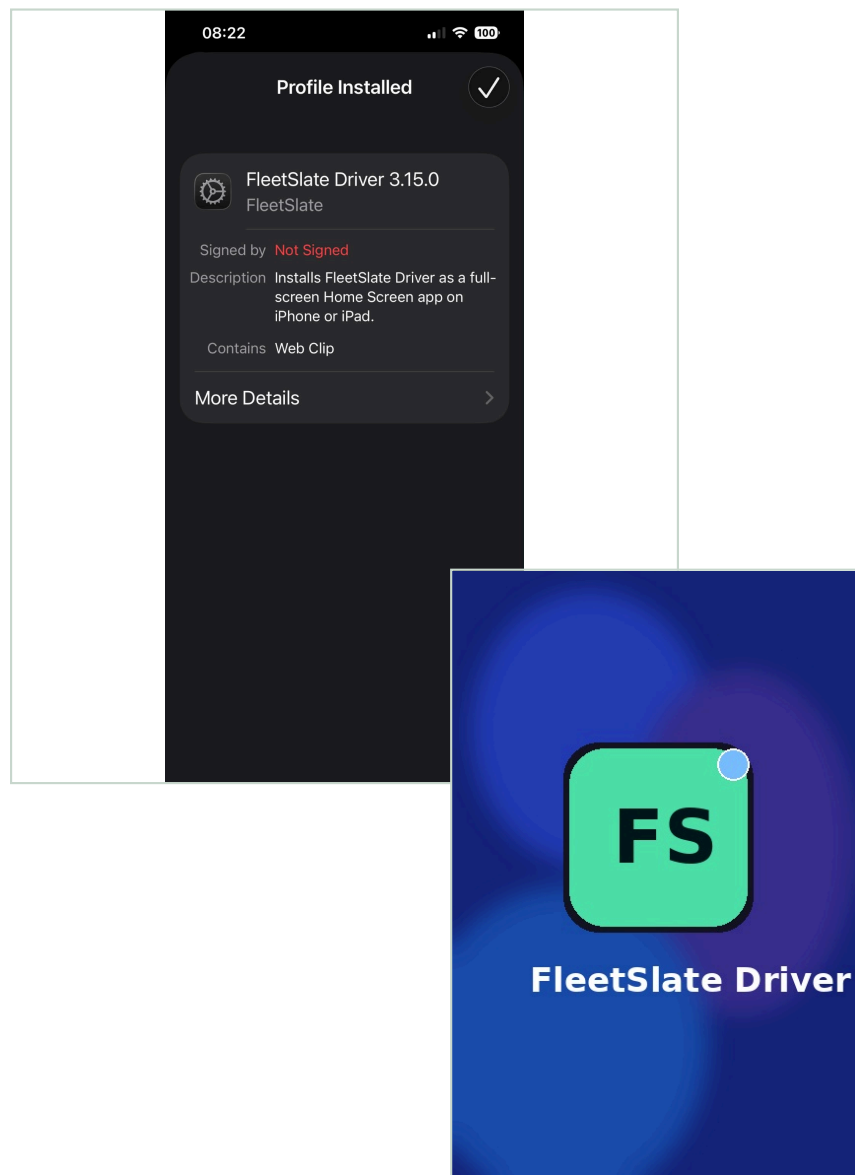

STEP 06

Confirm Profile Installed and open FleetSlate Driver

When iOS shows Profile Installed, finish the screen and return to the Home Screen. FleetSlate Driver is now available as its own app icon.

- The app icon opens FleetSlate Driver directly.
- Keep the device online for the first pairing and sync test.

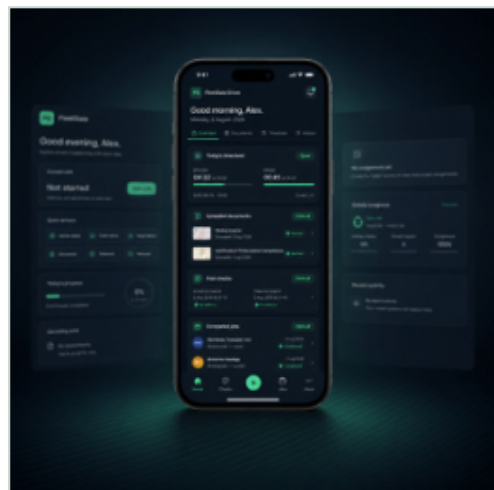

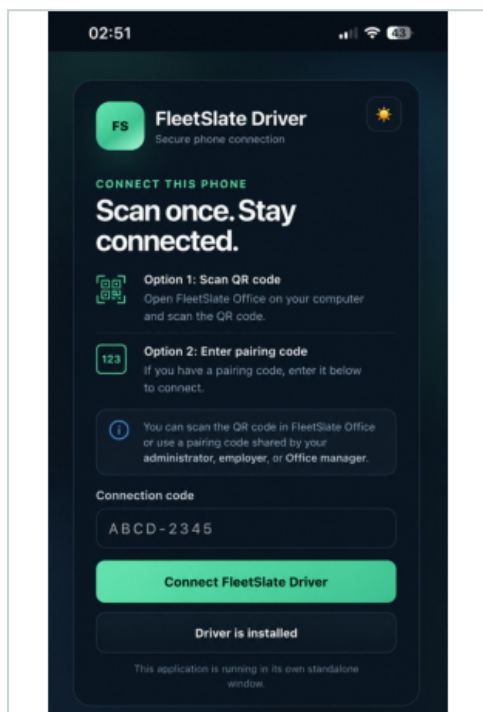

STEP 07

Pair the device once, then confirm future launches go straight to Home

Open FleetSlate Driver. Scan the QR code shown in FleetSlate Office or enter the short connection code. After one successful pairing, close the app fully and open it again to make sure the driver lands on Home without entering the code again.

- Tap Connect FleetSlate Driver after entering the correct code.
- You only need to pair again after a disconnect or device reset.

READY TO USE

Use the Download page whenever you need an installer or PDF guide. Keep activation keys, private download links and administrator access private.

- Open fleetslate.uk/download/ for installers and all PDF guides.
- Open fleetslate.uk/installation/ for the full web-based setup instructions.
- Use the support form if a device does not behave as shown.
