

FleetSlate Office - macOS Installation Guide

Download the current macOS package, approve the security prompt if needed, complete the installation and launch FleetSlate Office.

GUIDE OVERVIEW

What you will do

Use the Mac that will normally run FleetSlate Office. Keep internet access available during the first setup and first sync test.

- 01 Open the downloaded FleetSlate folder**
Keep the package contents together until installation is complete.
- 02 Run INSTALL-FLEETSLATE-MAC.command**
Start the installer from the downloaded FleetSlate folder.
- 03 Approve the app in Privacy & Security if macOS blocks it**
Use Open Anyway only when the file came directly from fleetslate.uk or your official delivery link.
- 04 Confirm Open in the macOS warning dialog**
This is the second part of the one-time security approval.
- 05 Wait for FleetSlate Setup to complete**
The installer prepares the app and required files automatically.
- 06 Launch FleetSlate and confirm it appears in Applications**
This confirms the Mac-side installation finished correctly.
- 07 Choose the correct first-launch route**

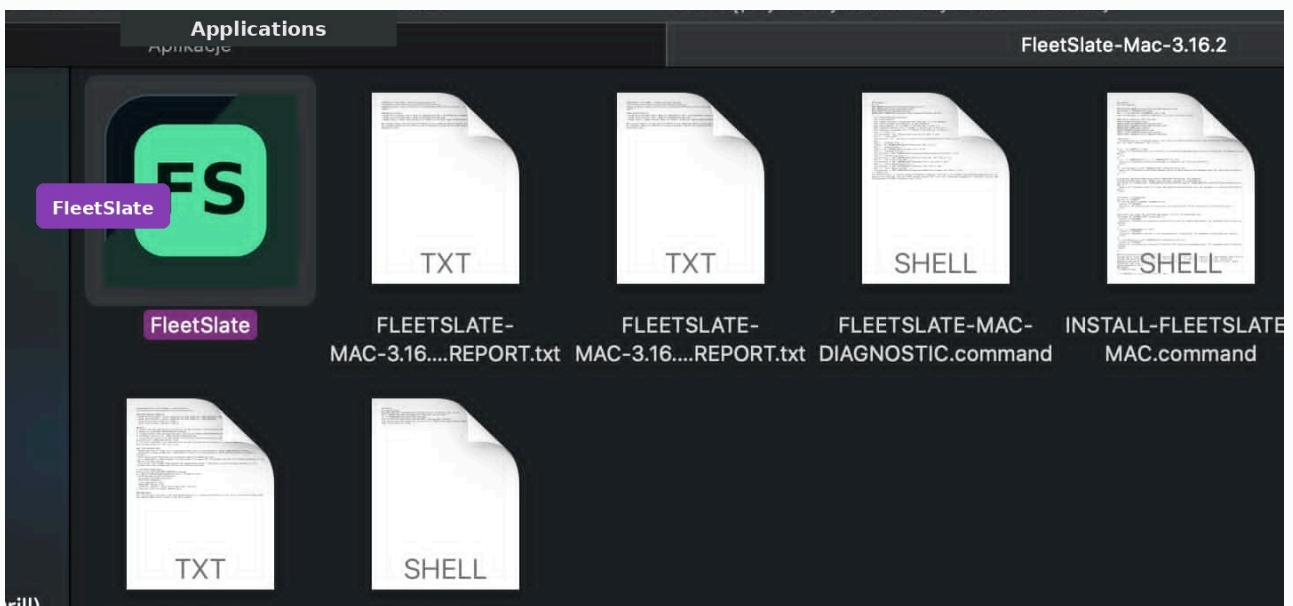

Keep it simple

STEP 01

Open the downloaded FleetSlate folder

After downloading the macOS package, open the FleetSlate-Mac-3.16.2 folder and keep all included files together until setup finishes.

- Use the Mac that will normally run FleetSlate Office.
- Do not rename the installer files before the first installation.
- If you move the folder, place it somewhere simple such as Downloads or Desktop.

What to look for

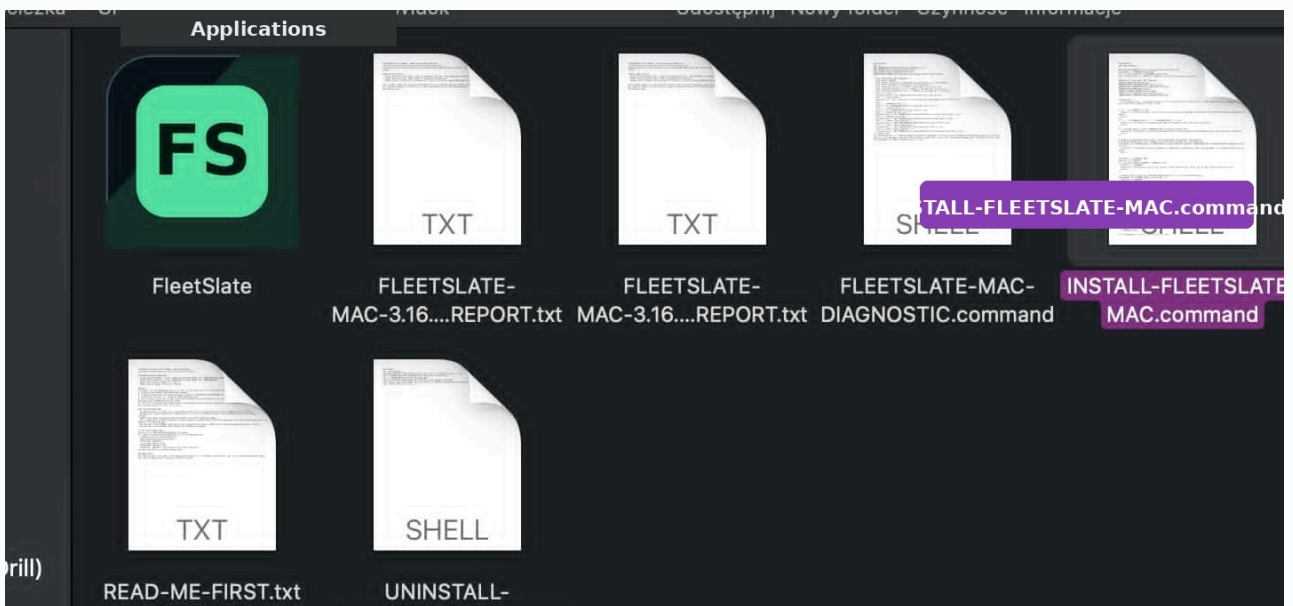

The folder normally contains the FleetSlate app, install command, diagnostic command, uninstall command and text files such as READ-ME-FIRST.

STEP 02

Run the macOS installer command

Inside the FleetSlate folder, open "INSTALL-FLEETSLATE-MAC.command" to start the setup process.

- This starts the dedicated FleetSlate installer routine for macOS.
- If the file is highlighted, double-click it or open it from the context menu.
- Keep the rest of the FleetSlate folder available until installation completes.

If nothing happens

Check whether macOS showed a security block. If it did, continue to Privacy & Security and use Open Anyway.

STEP 03

Approve the app in Privacy & Security

If macOS blocks the first run, open System Settings (or System Preferences on older versions), then Privacy & Security, and click Open Anyway.

- Only approve the installer when the file came directly from fleetslate.uk or your official FleetSlate delivery link.
- This approval is normally required only once on a given Mac.
- After approving, continue and confirm Open when macOS shows the final warning dialog.

Older macOS versions

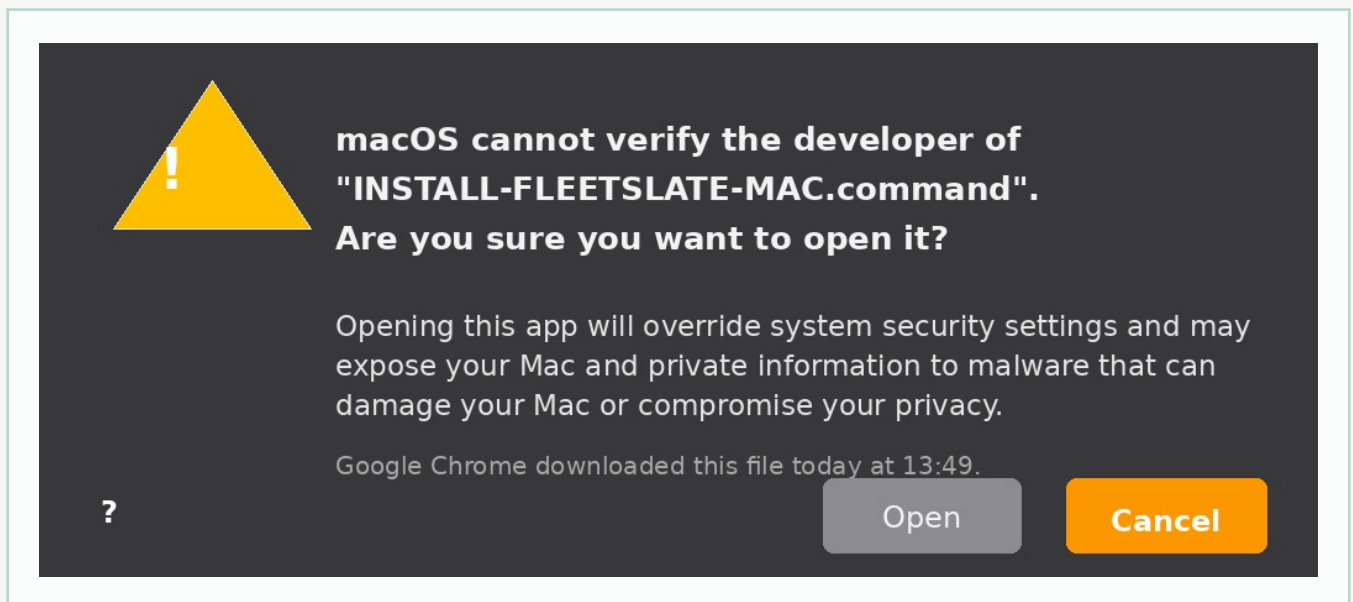

On some Macs this screen is called Security & Privacy. The wording and layout can vary slightly, but the approval action is the same.

STEP 04

Confirm Open in the macOS warning dialog

After using Open Anyway, macOS may display one more confirmation window. Choose Open to continue the FleetSlate installation.

- This is the normal second step of the one-time macOS security approval.
- If you choose Cancel by mistake, return to Privacy & Security and click Open Anyway again.
- Do not use files from unknown sources. Proceed only when you recognise the FleetSlate installer.

Security reminder

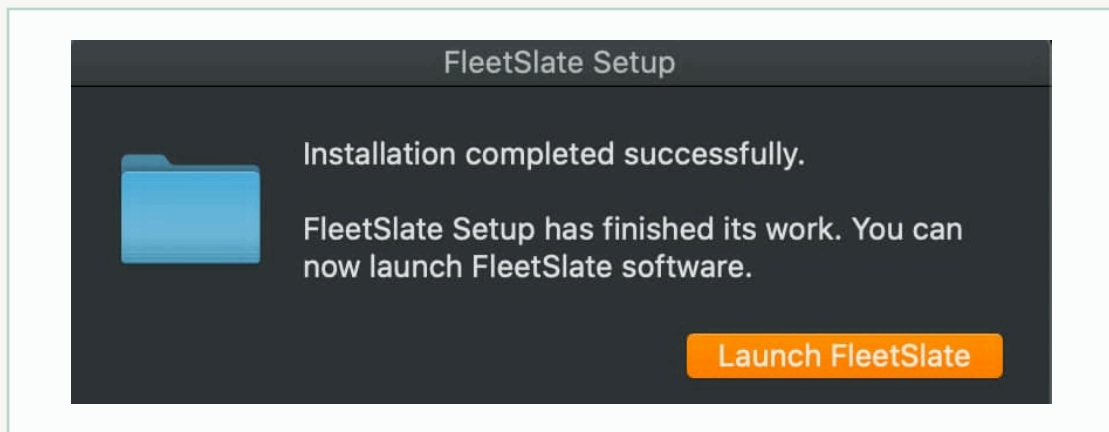

The current release may not use a code-signing certificate yet. That is why macOS can ask for manual approval on first run.

STEP 05

Wait for FleetSlate Setup to finish

Allow the installer to complete its work. When the setup window says the installation completed successfully, choose Launch FleetSlate.

- Do not close the setup window while installation is still in progress.
- The installer prepares FleetSlate so you can launch the app immediately after setup.
- If the Mac asks for permission during installation, follow the on-screen prompts.

Next action

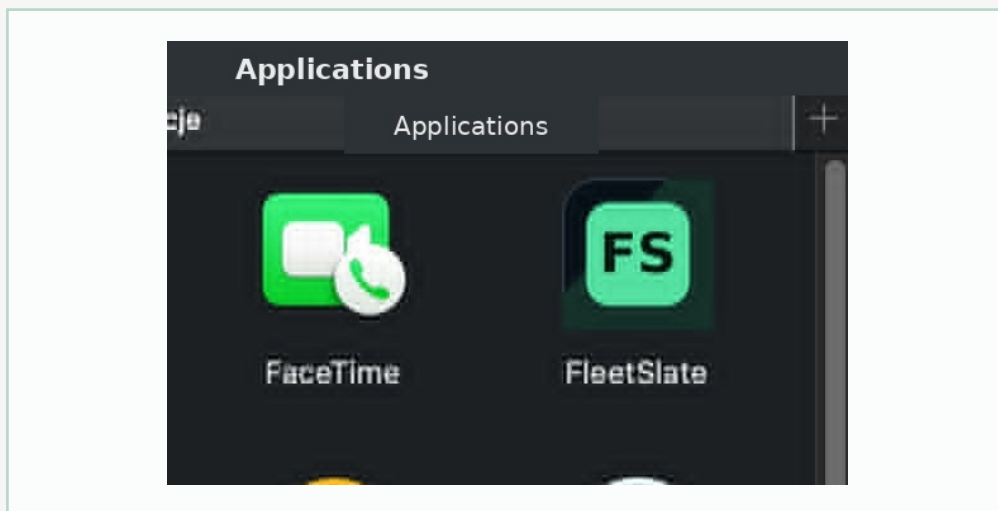

After clicking Launch FleetSlate, the app should open normally. You can also open Applications and start FleetSlate from there.

STEP 06

Launch FleetSlate and check Applications

After installation, FleetSlate should be available in the Applications folder. This confirms the app was installed on the Mac correctly.

- You can launch FleetSlate directly after setup or later from Applications.
- If you keep FleetSlate in Applications, macOS management and future updates are easier to handle.
- If the app does not appear, run the installer again and repeat the approval steps carefully.

Tip

On the first successful launch, you can optionally keep FleetSlate in the Dock for faster access.

STEP 07

Choose the correct first-launch route

Once FleetSlate opens, follow the route that matches your situation on this Mac.

Create a new company

Use this on a brand-new FleetSlate setup when you are creating the first company workspace on this Mac.

Connect to an existing company

Use this when the company already exists and this Mac needs to join it as another Office device.

Recover company after reinstall

Use this after reinstalling FleetSlate when you need to restore the company using the recovery email and one-time code.

Sign in with an existing admin PIN

Use this when FleetSlate was already set up on this Mac and you only need normal local Office access.

Important

Keep the Mac online during the first workspace connection or recovery so FleetSlate can complete the initial sync properly.

Driver installation happens later

Once FleetSlate Office is ready, you can add drivers, create vehicles, and send Android or iPhone installation links from inside Office.

READY TO USE

Your FleetSlate macOS installation is ready

You can now continue with normal FleetSlate setup, connect the company, and begin your first real Office-to-Driver workflow.

Before you start using FleetSlate:

- Keep the original installer folder until you confirm the app opens correctly.
- Store administrator PINs, recovery details and download links securely.
- Use fleetslate.uk whenever you need the latest installer or guide.
- If you reconnect a Mac after reinstalling, use the official recovery flow instead of creating a duplicate company.

Support

If the Mac does not behave as shown in this guide, repeat the installation from the official files first. If the issue remains, use the FleetSlate support contact or official delivery channel.

Where to go next

After installation, the next logical steps are: create or connect the company workspace, verify Office access, add the first driver and vehicle, then send the first Driver connection link.
